

OBJECTIVE

"Aspiring Web Developer with strong foundation in JavaScript, React.js, Node.js, and MongoDB, eager to apply problem-solving skills and innovative ideas to build scalable web applications. Seeking an entry-level opportunity to contribute to a growth-oriented organization while enhancing technical expertise in frontend backend development."

EDUCATION

IES College Of Technology, Bhopal (RGPV)	Bhopal, M.P.
BTech – Computer Science & Business System(CSBS), Current (CGPA- 6.96)	2022-2026
Nandan Kids Higher Secondary School – MP Board	Rewa, M.P.
Intermediate (64.00%)	2022
Matriculation (72.00%)	2020

SKILLS SUMMARY

Languages(DSA & OOPs): Java
Frontend: ReactJS, HTML, CSS, JS, Material UI
Database: MongoDB
WordPress: WordPress Website Development | site view |
CS Subjects: Data Structures and Algorithms, Object-Oriented Programming, Database Management System, System Design (LLD), Operating System, Computer Networks.

Languages (Development:) JavaScript, Python (Basic)
Backend: ExpressJS, NodeJS

- PROJECTS
- STODOX – Location-Based Student Marketplace: Demo Link | Github | Dec '24 – Current
- Project Overview: A responsive, full-stack web application enabling students to buy and sell used academic and household items within a 20km radius of their location after graduation. The platform features secure OTP-based authentication, a product feed, and real-time buyer–seller chat with a deal-fix system for smooth transaction finalization
 - Front-end (Deployed in Netlify): ReactJS, CSS3, Context API
 - Designed a mobile-friendly, responsive UI with custom advanced CSS styling, hover effects, and animations.
 - Separate CSS files for each component to maintain modularity and scalability.
 - Implemented routes for Home, Product Listings, Product Details, Authentication, and Chat.
 - User authentication via email/username + password and OTP verification during registration (6-digit OTP via Nodemailer).
 - Integrated geolocation to filter and display only products posted by sellers within 20 km of the buyer’s location.
 - Used React Context API for global state management and Axios for API communication.
 - Back-end & Database: Node.js, Express.js, MongoDB
 - Built RESTful APIs for authentication, product management, location filtering, and chat functionality.
 - Implemented JWT-based authentication for secure user sessions and bcrypt for password hashing.
 - OTP generation and email sending handled via Nodemailer with 10-minute expiry.
 - MongoDB Compass used for storing user profiles, product data, chat messages, and deal statuses.
 - Back-end Deployment: Netlify
 - Dockerized the backend application for consistent deployment across environments.
 - Deployed on Netlify with SSL for secure connections.
 - Set up environment variables and secret keys securely on the server.

- CERTIFICATION
- Cloud Computing (SaaS, PaaS, IaaS) – Coursera
 - JavaScript Fundamentals – W3Schools | Coursera
 - Introduction to Artificial Intelligence (AI) – IBM | Coursera
 - Python Programming Foundation – Infosys | Springboard
 - Generative AI for Data Science – Microsoft | Coursera
 - HTML – Frontend Development – Great Learnin
